PROFESSIONAL EXPERIENCE

Intercultural Diversity Research Institute — Freelance Full Stack Developer

JULY 2023 - JUNE 2025

Development of an electronic dictionary for the Terena Indigenous language, which is at risk of extinction. The first phase of the project involved creating an API to register 1,268 terms provided by the institution. Next, a progressive web application (PWA) integrated with the API was developed, offering a simple and efficient search interface. Subsequently, mobile apps for Android and iOS were launched with offline functionality, allowing users to locally download audio files, an essential feature for communities without internet access. After the completion of the first phase, the project was expanded to become scalable. The new architecture now supports the creation of multiple dictionary instances, each dedicated to a different Indigenous language. Currently, in addition to the Terena language, the platform is being adapted to include six other endangered languages, with linguistic collections being developed based on field research in villages. This expansion has multiplied the impact of the original initiative, providing digital tools aimed at preserving and teaching various Brazilian Indigenous languages.

Technologies used: Express (NodeJS), MongoDB Atlas, Google Firebase Storage, React, React Native.

Development of an application for tracking IFMS graduates — Undergraduate Scientific Initiation Project

AUGUST 2021 - AUGUST 2022

An enterprise social network for graduates from all IFMS campuses. Its main objective is to collect course evaluations, offer job opportunities, and encourage graduates to continue at the institution through other courses or selection processes so that they can join the institution as collaborators.

Technologies used: Figma, React Native.

IFMS Aqui Comunica: Scrum — High School Scientific Initiation Project

AUGUST 2017 - AUGUST 2018

Event platform related to Federal Institute of Mato Grosso do Sul - Aquidauana Campus developed by a team of four students from the Integrated Technical Course in Informatics using the Scrum methodology. The teaching project was accredited for both FECIAQ (Aquidauana Science and Technology Fair) and FETECMS (Mato Grosso do Sul Technology, Engineering and Sciences Fair), considered the largest science fair in the Midwest region.

Technologies used: PostgreSQL, Java, Hibernate, Spring Boot, Thymeleaf, JavaScript.
