Full Stack Developer (B2 English level)

Developing since 2020, studying programming since 2017

PROFESSIONAL EXPERIENCE

Pimenta Tecnologia e Sistemas — Developer e Partner
OCTOBER 2026 - CURRENTLY
Serving as a developer and partner at Pimenta Tecnologia e Sistemas, a custom software development company with a portfolio of multi-tenant SaaS solutions and products aimed at the private and GovTech sectors, including ERP with embedded AI, and management systems for healthcare, education, buffet restaurants, optical stores, and logistics. Participation in structuring the Mini Hub de Tecnologia, a project approved under the Centelha 3 MS Program, an innovation funding initiative aimed at consolidating a regional hub for development, training, and technology commercialization in Anastácio/Aquidauana, MS. Involvement in technical planning, data modeling, fixes, and adjustments to the company's portfolio solutions, contributing to the evolution and stability of production platforms. Currently transitioning to join the company's executive board.

Technologies used: React, Next.js, Node.js, TypeScript, SQL and NoSQL databases, REST APIs, LLM integration, Git.

Pimenta Tecnologia e Sistemas LTDA — Desenvolvedor Full Stack (Independent contractor CPF)
APRIL 2026 - MAY 2026
Worked as a full stack developer on custom software projects for clients in the financial and payments sectors, focusing on ERP integration, bank reconciliation automation, and modernization of management portals. Participated in the development of an AI Agent module for bank reconciliation integrated with Conta Azul (ERP), including a chat interface, action audit screen, and sequential execution with real-time feedback via Server-Sent Events (SSE), under TDD methodology. Also worked on front-end architecture mapping and execution planning for a payment gateway and merchant portal for client Beeteller (project discontinued due to client contract termination), including technical debt analysis and code standard definition. Additionally collaborated on the development of a mobile-first application for boarding and disembarking workers on offshore platforms, with a functional prototype generated by generative AI (Base44) and subsequent refactoring of interfaces and source code. Cross-functional involvement in requirements gathering, data modeling, API contract definition, and code review within a multidisciplinary team.

Technologies used: Next.js, React, React Native, TypeScript, Node.js, MariaDB, TailwindCSS, styled-components, Chart.js, Jest, Cypress, SSE, REST APIs, LLM integration (Anthropic/OpenAI), Base44 (generative AI), Git, GitHub Actions.

Maria Corrêa Dias State Civic-Military School — IT Intern
NOVEMBER 2024 - MARCH 2025
Completed the mandatory IT internship at Maria Corrêa Dias State Civic-Military School, focusing on teacher training, technical support, development of educational workshops, and organization of pedagogical activities. Made significant contributions to the creation of technology workshops, administration of diagnostic questionnaires, development of presentations on cloud computing, organization of digital infrastructure, and support to the school office. Participated in pedagogical meetings to define the Basic Informatics curriculum and worked directly in the classroom with AJA-MS students. Provided technical support to the school community, including software installation, equipment maintenance, and support for the use of educational technologies. Created institutional graphic materials and collaborated on school events and informative presentations about technical and higher education opportunities.

Instituto de Pesquisa da Diversidade Intercultural — Full Stack Developer (Freelance)
JULY 2023 - JUNE 2025
Development of an electronic dictionary for the Terena indigenous language, which is at risk of extinction. The first stage of the project consisted of creating an API for registering 1,268 terms provided by the institution. Next, a progressive web application (PWA) integrated with the API was developed, offering a simple and efficient lookup interface. Subsequently, mobile applications for Android and iOS were released with offline functionality, allowing local download of audio files, an essential feature for communities without internet access. After completing the first phase, the project was expanded to become scalable. The new architecture enabled the creation of multiple dictionary instances, each dedicated to a different indigenous language. Currently, in addition to the Terena language, the platform is being adapted to include six other endangered languages, with linguistic collections under development based on field research in villages. The expansion multiplied the impact of the original initiative, offering digital resources aimed at the preservation and teaching of various Brazilian indigenous languages.

Technologies used: Express (NodeJS), MongoDB Atlas, Mongoose GridFS, Google Firebase Storage, React, React Native.

1º Subgrupamento de Bombeiros Militar Independente — Full Stack Developer (Freelance)
MAY 2021 - MARCH 2022
Progressive web application for inspection, recording, and generation of PDF reports for firefighting vehicles of the Fire Department of the municipality of Aquidauana, MS. It is worth noting that the report organization provided by the application resulted in a positive budget adjustment for the corporation.

Technologies used: React, Express (NodeJS), MongoDB Atlas.

Urban Agroecological Farm Da Roça Agroecológico — Front-end Developer (Freelance)
AUGUST 2020 - MAY 2021
Prototyping and development of an online shopping application for an urban agroecological farm in the municipality of Aquidauana, MS.

Technologies used: Figma, React Native, React Native Paper, Font Awesome.

Federal Institute of Education, Science and Technology of Mato Grosso do Sul (IFMS) — IT Intern
SEPTEMBER 2019 - DECEMBER 2019
Application for students to evaluate school meals. The developed system used star ratings and produced a report of satisfaction metrics per meal offered. In March 2020, the system became unviable due to the immediate suspension of academic activities at the institute.

Technologies used: PHP, PostgreSQL.

ACADEMIC BACKGROUND

UFMS, Brazil — Professional Master's Degree in Applied Computing
MARCH 2027 - DECEMBER 2028 (In progress)

UFMS, Brazil — Master's Degree in Computer Science
MARCH 2026 - JUNE 2026 (*Dismissed according to Res. 1.035/2025, Art. 63*)

IFMS, Brazil — Technologist Degree in Internet Systems
AUGUST 2021 - DECEMBER 2025

IFMS, Brazil — Integrated Technical Course in Informatics
FEBRUARY 2017 - JUNE 2021

TECH STACK

Programming languages
TypeScript, JavaScript

Front-end
React, Expo React Native, Tailwind CSS, styled-components, Figma

Back-end
Express, Node, Firebase, Prisma

DevOps
Git, GitHub Actions, Vercel, Docker, Redis

Databases
MongoDB, Postgres, SQLite, MySQL

TDD
Cypress, Postman, Jasmine, Jest

RELEVANT PROJECTS

Ai, que fome! — Academic project
AUGUST 2023 - OCTOBER 2023
School meal management platform developed for IFMS Aquidauana - MS by the 5th semester of the Technologist Degree in Internet Systems as a requirement for obtaining a partial grade in the activities of the Programming Language IV course unit.

Technologies used: Express (NodeJS), MongoDB Atlas, React.

---

Development of an application for tracking IFMS alumni — Undergraduate Scientific Initiation Project
AUGUST 2021 - AUGUST 2022
Business social network for graduates from all IFMS campuses. Its main goal is to collect course evaluations, offer job opportunities, and encourage graduates to continue at the institution through other courses or selection processes so they can join the institution as staff members.

Technologies used: Figma, React Native.

Kalivôno: promoting access to the Terena language through a progressive app — High School Scientific Initiation Project
AUGUST 2019 - AUGUST 2020
Electronic dictionary of the Terena language, an indigenous language at risk of extinction. An API was developed to register 1,268 terms provided by the institution, along with a progressive web application to consume the API's lookup services. Currently, the application is used in indigenous villages to teach younger indigenous people the native language of their ancestors. Note: in August 2020, only the Minimum Viable Product was delivered; from July to October 2023, the Android application was developed, allowing users to download audio files of the pronunciation of Terena terms.

Technologies used: Express (NodeJS), MongoDB Atlas, Mongoose GridFS, React.

IFMS Aqui Comunica: Scrum — Scientific Initiation Project in the Integrated Technical Course in Informatics
AUGUST 2017 - AUGUST 2018
Platform for events related to IFMS Aquidauana, developed by a team of four students from the Integrated Technical Course in Informatics using the Scrum methodology. The teaching project was accredited for both FECIAQ (Aquidauana Science and Technology Fair) and FETECMS (Mato Grosso do Sul Fair of Technologies, Engineering and Sciences), considered the largest science fair in the Midwest region.

Technologies used: PostgreSQL, Java, Hibernate, Spring Boot, Thymeleaf, JavaScript.
